

- 1 Complete the calculation.
Use the bar model to help you.

$$\frac{5}{6} - \frac{6}{12} = \frac{10}{12} - \frac{6}{12} = \frac{4}{12}$$

Bar models do not need to be shaded.

- 2 Match the calculations.

$\frac{3}{5} - \frac{11}{30} =$		$\frac{21}{30} - \frac{11}{30}$
$\frac{8}{15} - \frac{11}{30} =$		$\frac{18}{30} - \frac{11}{30}$
$\frac{7}{10} - \frac{11}{30} =$		$\frac{16}{30} - \frac{11}{30}$

- 3 Complete the subtraction.

$$\frac{7}{8} - \frac{3}{16} = \frac{\boxed{14}}{16} - \frac{3}{16} = \frac{\boxed{11}}{16}$$

- 4 Complete the sentence.

You can shade the bar models to help.

The difference between $\frac{1}{2}$ and $\frac{1}{8}$ is $\frac{\boxed{3}}{\boxed{8}}$

Bar models do not need to be shaded.

- 5 Work out the difference.

$$\frac{5}{8} - \frac{1}{2} = \frac{\boxed{1}}{\boxed{8}}$$

Accept equivalent fractions.

- 6 Complete the subtraction.

$$4\frac{3}{7} - 1 = \boxed{3} \frac{\boxed{3}}{\boxed{7}}$$

Accept equivalent fractions.

- 7 Work out the missing number.

$$2\frac{2}{7} - \boxed{1} = 1\frac{2}{7}$$

- 8 Use the bar model to represent the calculation.

$$1\frac{7}{12} - \frac{1}{3} = 1\frac{3}{12}$$

Accept bar model with any 4 shaded cells crossed out.

9 Complete the subtraction.

$$5\frac{1}{3} - \frac{1}{9} = \boxed{5} \frac{\boxed{2}}{\boxed{9}}$$

Accept equivalent fractions.
